## CALCULATING THE SURFACE COVERAGE

## FLEXTHERM.

## PRECISE MEASUREMENTS, THE KEY TO A SUCCESSFUL INSTALLATION!

Step 1: Calculate the total surface area of the room.
Floor Warming and Heating Systems
Step 2: Calculate the surface area of the permanent fixtures.
Step 3: Subtract the surface area of the permanent fixtures from the total surface area.
The result is the maximum area to be covered.
Example

Step 1: Calculate total surface area: $150 \mathrm{in} \times 124 \mathrm{in}=18,600 \mathrm{in}^{2}$ or $129.2 \mathrm{ft}^{2}\left(\mathrm{in}^{2} \div 144=\mathrm{ft}^{2}\right)$
Step 2: Calculate the area of the permanent fixtures:

|  | Dimensions | Angles to include | $\begin{aligned} & \text { Surface area } \\ & \mathrm{in}^{2} \end{aligned} \mathrm{ft}^{2}$ |
| :---: | :---: | :---: | :---: |
| Shower: | 48 in $\times 48$ in $=$ |  | $2304 \mathrm{in}^{2}=16 \mathrm{ft}^{2}$ |
| Bath: | 60 in $\times 60$ in | -450 in $=(30 \mathrm{in} \times 30 \mathrm{in}) \div 2=$ | $3150 \mathrm{in}^{2}=21.9 \mathrm{ft}^{2}$ |
| Vanity*: | 108 in $\times 21$ in $=$ |  | $2268 \mathrm{in}^{2}=15.8 \mathrm{ft}^{2}$ |
| Toilet: |  |  | $288 \mathrm{in}^{2}=2 \mathrm{ft}^{2}$ |
|  |  |  | $8010 \mathrm{in}^{2}=55.7 \mathrm{ft}^{2}$ |

Step 3: Subtract the permanent fixtures from the total surface area: $\quad 129.2 \mathrm{ft}^{2}-55.7 \mathrm{ft}^{2}$

## Maximum area to be covered: $\mathbf{7 3 . 5} \mathbf{f t}^{\mathbf{2}}$

[^0]
[^0]:    Note: When installing a heating mat, the mat must cover between $90 \%$ and $98 \%$ of the surface for optimal coverage. When installing with FLEXSnap + , the entire surface of the room must be covered with mesh.
